## EXPERIENCE

---

### Junior Software Developer

Dec. 2025 – Present

Atradius 🏢

Milan, Italy

- Serving as a Software Quality Assurance (QA) Engineer with a structured transition path toward Backend Development.
- Gaining deep domain expertise in Fintech and Insurtech sectors, specifically focusing on credit management systems and insurance policy lifecycles.
- Executing comprehensive testing suites to ensure software reliability while analyzing business requirements within the banking and insurance regulatory frameworks.
- Collaborating with senior developers to bridge the gap between quality control and backend logic implementation.

### Junior full stack intern

Sep. 2025 – Dec. 2025

ZeroB s.r.l. 🏢

Turin, Italy

- Designed and developed a comprehensive ERP module utilizing the MVC (Model-View-Controller) pattern to ensure a clean separation of concerns.
- Engineered robust REST APIs using Spring Boot and Spring Web; implemented data persistence and CRUD operations via Spring Data JPA.
- Integrated a secure authentication and authorization system using Spring Security to manage user access levels.
- Built a responsive user interface with HTML5, CSS3, and JavaScript, featuring a dynamic collapsible sidebar and interactive data tables with search functionality.
- Integrated Chart.js to provide real-time graphical representations of orders and business categories for data visualization.
- Leveraged Thymeleaf for server-side rendering and implemented client-side data integrity checks using jQuery Validation.

### Software Engineer intern

Jul. 2022 – Feb. 2023

National Institute of Metrological Research – INRiM 🏢

Turin, Italy

- Developed a user-friendly GUI software for Microsoft Windows using C#, tailored for interfacing with a Gage PCI Digitizer utilized in an advanced non-linear optical microscope setup.
- Implemented multi-threaded programming to optimize software performance, enabling concurrent processing of data from all 8 channels of the acquisition card. This ensured seamless real-time data acquisition and analysis, even during extended time-lapse experiments.
- Developed software features for generating high-quality images of analyzed cells and graphical representations, crucial for aiding researchers in analyzing experimental data.
- Integrated socket communication for seamless interaction between the software and the digitizer device.
- Leveraged C# libraries such as Bitmap, Libtiff, Net, and System to enhance functionality and streamline development.
- Utilized Git for version control to ensure collaboration and manage software revisions effectively.

## EDUCATION

---

### Polytechnic University of Turin

Turin, Italy

Bachelor of Science in Computer Engineering

Oct. 2019 – Ongoing (part-time)

### Liceo Scientifico Statale Galileo Ferraris

Turin, Italy

Diploma of Scientific High School

Sep. 2014 – Jul. 2019

### Big Sky High School

Missoula, MT, US

High School Exchange Program

Aug. 2017 – Jun. 2018

## PROJECTS

---

### **Fantacitorio bot** 🐙 | *Python, Telegram API, Snsrape, Git*

- Development of a Telegram bot using the Telegram API to create a game manager inspired by fantasy football. The bot is capable of live scraping a website updated during a TV show and computing points and rankings for teams. Users can interact with the bot via a Telegram group chat involving all players.

### **La Vuelta** 🐙 | *Python, Selenium, BeautifulSoup*

- Web Scraping project in Python for the real-time extraction and analysis of unstructured data related to the La Vuelta cycling race, utilizing libraries such as BeautifulSoup and Selenium. The extracted data is transformed for statistical analysis, and the results could be notified via the Telegram API. Source code management is ensured by Git.

### **Average deposit & bank statement** 🐙 | *Python, Pandoc, csv*

- Development of an average deposit and bank statement calculator that generates a paper document containing all data and information. The calculator operates based on a \*.cvs file (generic MS Excel), provided by the user as input.

### **OrderManagementCLI** 🐙 | *Java*

- Development of a functional Command Line Interface (CLI) application designed for streamlined order management. The project involved designing the underlying business logic for customer/product data management and ensuring data persistence.

## TECHNICAL SKILLS

---

**Languages:** C, C#, Java, Matlab, Python, Assembly, Shell, SQL, Lua, Latex, Markdown, HTML, CSS, JavaScript.

**Frameworks:** Spring Boot, Spring Security, Spring Data JPA, Chart.js, jQuery, Thymeleaf.

**Developer Tools:** Linux, Command Line, Git, GitHub, GitLab, Svn, Raspberry Pi, Arduino, OOP, Algorithms and Data Structures, Vim, VSCode, Visual Studio, Eclipse, IntelliJ.

**Methodologies:** Software Testing, MVC Architecture, RESTful APIs, Fintech/Insurtech Domain Knowledge.

**Languages:** Italian, English
